PROFILES IN PRODUCTIVITY:
SAULSBURY INDUSTRIES IS REVOLUTIONIZING EHS MANAGEMENT IN CONSTRUCTION

THE NEXT GENERATION OF EHS MANAGEMENT

For decades, Saulsbury Industries has focused on careful planning, safe work systems and accountability to drive safety in construction. This foundation has helped the organization become an industry leader in environmental, health and safety.

Realizing that a focused effort on continuous improvement is particularly important for EHS, Saulsbury turned to Cloud EPC to help transform the way it manages, tracks and reports safety data across the organization. Leveraging the power of Cloud EPC's safety trend analysis tools, the company now can visually examine unique trends in safety occurrences with just a click of a button. With this feature, project team members can quickly identify patterns in unsafe behavior, perform a root cause analysis, implement corrective actions to ensure their team continues to work safely and shape safety training initiatives.

INSTANT UPDATES

Communication is essential to keeping any workplace safe. If a near miss or injury occurs onsite, it is critical for key project stakeholders to be instantly informed to mitigate the potential of reoccurrence. To help with this, Saulsbury leverages Cloud EPC's mobile technology to:
- instantly log safety observations or incidents in the field;
- receive push notifications and alerts through the Cloud EPC mobile app; and
- take photos, record witness statements and capture videos.

LEADING INDICATORS

While lagging indicators are vital to understanding past project trends, Saulsbury realizes that incident prevention requires additional focus on what lies ahead. That is why it is implementing Cloud EPC's new Auditing system to develop customized enterprise safety audits on its jobsites. This tool will help Saulsbury focus on predictive indicators and conduct preventative actions to be sure that it is proactive in eliminating unsafe work conditions on all projects.

> " Cloud EPC has allowed Saulsbury to identify trends, which gives us the ability to mitigate minor issues before they become major issues. With the real-time capabilities, we know in an instant each project's safety performance and HSE rates. Cloud EPC has increased our overall efficiency in safety tracking.
